For Mind It! version 1.69, updated for build 164. This short edition covers **one kind of night**: you host from the **laptop app** (`Mind It!.exe` on Windows, or `Mind It!.app` on a Mac), and the players join from home on **Teams, Zoom or Google Meet**. Usually each team is one person.

> **Playing in the room instead?** Team phones, Phone Buzzer Mode, the 💡 hint, the Galaxy Tab (or an Android phone) as host or remote, Mind It! TV and Wi-Fi TVs are for nights in the room. They are covered in the **Quick Start** (`MIND_IT_QUICK_START.pdf`) and the **Quizmaster Cheat Sheet**, not here.

New in build 164: up to 12 teams (was 10). Every screen was checked with 12: the TV, the laptop, the Galaxy Tab, phones and the results pictures.

New in builds 156–160:

- 🤖 **Practise alone with bots. Rehearsal** can add up to three computer teams — Sparky (Rookie), Byte (Pro) and Quanta (Genius). They pick clues, bet and **say their answers out loud** (Chapter 3).
- **Faster Question Database.** ➕ **Add to Round N** in one tap, ⇄ moves a question to another round, ✓ **2 of 3 games** shows how often a question was got right, and 📊 **Question stats** (Chapter 2). The database opens at once, even with thousands of questions.
- ⟳ **Sync devices** on the main menu keeps the laptop and the Galaxy Tab on the same players, games and questions. ← (e.g. ← **Players & History**) goes back one panel; **Close** goes all the way out.
- 🏆 **Season** tab in **Players & History** on the laptop (Chapter 9). 🏁 **End game now** in ⋯ ▾. Your theme now colours your host screens too.

Build 155:

- ▶ **Start the show:** one tap plays the opening on its own, from the intro to Round 1's board. You can ⏸ **Hold** any screen (Chapter 5).
- **A new end of the night.** One **step card** with one gold button per step: Mark → Reveal → Standings → Awards → Rascala → Winner → Season → End. The top three stay secret until the podium (Chapter 8).
- 🏆 **Season standings and the Grand Rascala** for Online Mode nights. Points carry over from night to night, all quarter (Chapter 9).
- 🏁 **End Quiz & save** and 🔁 **Rematch** (same teams, new questions) on the last card (Chapter 8).
- **8 new achievements**, including 👑 Rascala To Royalty and 🗺️ World Tour. Two new themes: 💘 **Valentine's Day** and 🎲 **The Risky Theme**.

Build 154: ▶ **Prepare tonight's quiz** and the laptop's main menu · Online Mode's 🎲 **random turn order** and **nicknames** · The Rascala! badge on the last-place team during play · sound clues · 12 achievements. **Build 153:** 📹 **Video Call** (the new name of Teams Presentation Mode) with a calmer picture for calls · Online Mode sets Motion to Subtle · up to 10 teams · podium finishes in the player stats · 🏁 End Quiz.

How to use this guide. Read Chapters 1–4 the day before, with the app open. Keep Chapters 5–8 and the shortcuts (Chapter 11) next to you on the night. Chapter 10 is the "help!" page. Button names are in **bold**, as in the app. The pictures are real screenshots of builds 155 and 160, with made-up team names. Scores show the UAE Dirham sign in the app; here we just write numbers ("+400").

🟡 **Not tried on a real call yet:** the build-155 and build-160 screens were checked on the build machine, not during a real Teams, Zoom or Meet call. Do a 10-minute practice call with a friend before the night (Chapter 4).

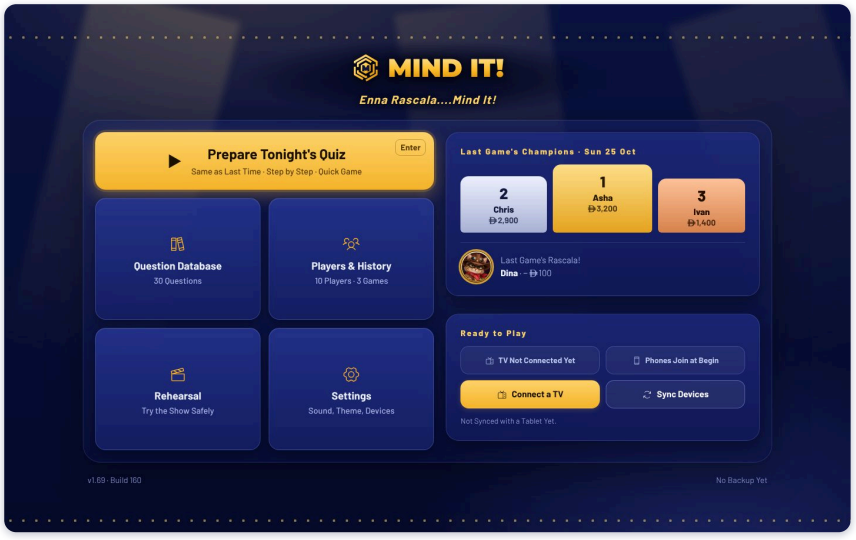

1. What You Need

Item	Notes
The laptop app	Windows (`Mind It!.exe`) or an Apple Silicon Mac (`Mind It!.app`). Plug the laptop into power and turn sleep off.
A video call	**Teams** (the desktop app), **Zoom** or **Google Meet**. You share one window: the **Audience View**.
The players	At home, on the call, with their camera and microphone. They answer **out loud**. Wagers and Mastermind It! answers go to you in a **private chat message**. No phones or apps needed.
Speakers or a headset	You hear the players. They hear the game through the call (Chapter 3).
Optional: a second screen	Handy: the Audience View on one screen, your controls on the other. One screen works too.

How a game works, in 30 seconds. Teams take turns to pick a square from a board of 6 categories × 5 values. You read the question. The team answers out loud. **Right** wins the value. **Wrong** loses it, and the same question goes to the next team. **Pass** costs nothing. Hidden **Blind It!** squares let a team bet. After the board rounds comes **Mastermind It!**: everyone bets secretly, then answers one last question. Most points wins. Level on points? Most correct answers wins.

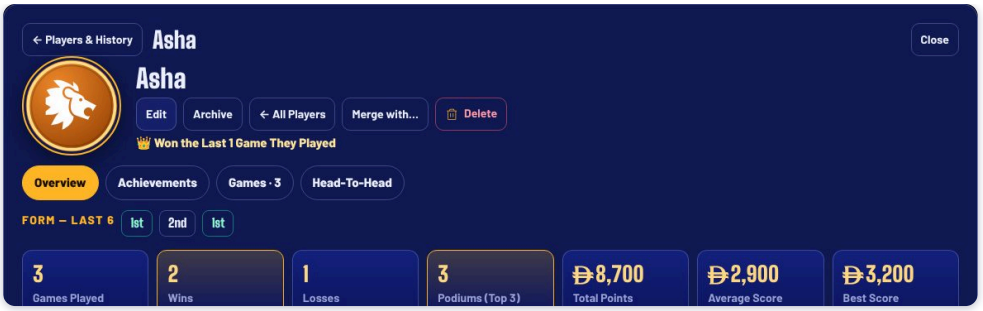

Opening Mind It! Double-click the app. The laptop opens on its **main menu**:

- ▶ **Prepare tonight's quiz** (or press **Enter**) — the quickest way to set up (Chapter 2).
- ⏯ **Continue last game** — only shows when a game was left unfinished.
- **Question Database**, **Players & History**, **Rehearsal** (a practice game where nothing counts, with optional bots) and **Settings** (opens Setup, with every setting).
- **Ready to play** on the right, with ⟳ **Sync devices** if you also use the Galaxy Tab.

*📸 Real screenshot (build 160) — the laptop's main menu, with last game's champions and **Ready to play**.*

Panels on top of panels. Open Players & History, then a player, then a game: the ← button at the top names the screen it goes back to and goes back one step; **Close** goes back to where you started.

📸 *Real screenshot (build 160) — a player's page opened from Players & History: ← **Players & History** at the top left, **Close** at the top right.*

Updates. Settings → 6 · Advanced → ⬆ App Update downloads the newest build next to the old one, then **Restart into build N**. Never do this during a game. Your players, history and questions stay.

---

2. Before the Night: Prepare Tonight's Quiz

Press ▶ **Prepare tonight's quiz**. Pick how you want to start:

- 🔁 **Same as last time → Use last game's setup** — last game's teams, players, rules, theme and special question in one tap. Only the questions are new.
- 🎯 **New quiz, step by step → Start the steps** — four short steps (below).
- ⚡ **Quick game → Play now** — 4 teams, 2 rounds, random questions from your Question Database.

Need the full settings? **Open all settings ›** is at the bottom. **Load an Excel quiz ›** loads a quiz from a spreadsheet.

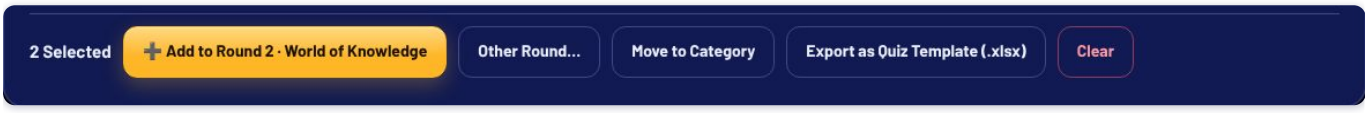

The four steps are shown as pills at the top: **Questions → Teams → How you play → Check**. You can tap any pill to jump back.

Step 1 · Questions

Each round needs 6 categories of 5 questions, plus one Mastermind It! question. Two easy ways:

- 🎲 **Random from the Question Database.** Mind It! fills the rounds for you, newest questions first. It avoids questions your players saw in their last games.
- 📄 **Load an Excel quiz.** In the Question Database, **⬇ Excel ▾ → Quiz Template** gives you a blank spreadsheet. Fill in the yellow cells, then load it here.

Adding your own picks from the Question Database. Tick questions and press **Add To Round**. After the first time, the bar offers **➕ Add to Round N** — the next ones go in with one tap (**Other round...** for a different round). ⇄ on a question in a round moves it to another round (full rounds are greyed out). 🔄 **Replace Round from Database** with a template that has fewer categories empties the leftover ones; ↩ **Undo** brings the old round back. Each question shows **✓ 2 of 3 games** (how often it was got right) and **More ▾ → 📊 Question stats** lists the ones nobody got and the ones everybody got.

📸 *Real screenshot (build 160) — the one-tap bar after adding questions: ➕ **Add to Round 2** and **Other round...**.*

To check or change single questions, use **✎ Edit the questions**. That opens **Setup → 4 · Rounds & Questions** with three tabs: **Rounds**, **Questions** and ⭐ **Mastermind It!**. 👁 **Preview Questions** shows a question exactly as the players will see it.

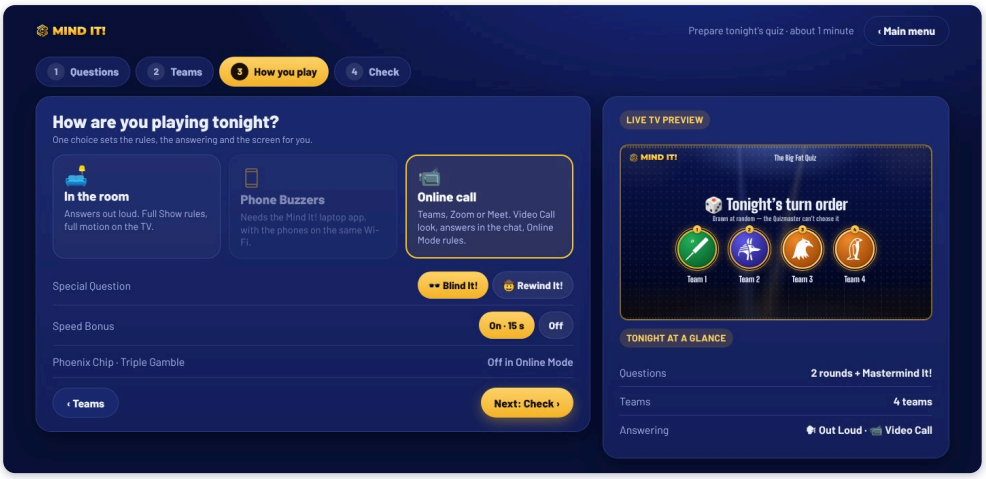

Values are automatic. With 2 rounds: Round 1 is 200–1,000 and Round 2 is 400–2,000.

Step 2 · Teams

For a call, each player is usually a team of one. **A one-player team takes that player's name and picture.**

- Players live in **Players & History** (Player Profiles). Each has a **Player Name**, an optional **Nickname** and a picture.
- **In Online Mode the nickname is shown** on screen instead of the real name, if the player has one. Player Profiles, Historic Games and the Excel exports always keep the real name.
- Every team needs at least one player. You need at least **2 teams** and can have up to **10**.
- **The Quizmaster can't also play.** Pick yourself as the host in **2 · Teams & Players → 🎤 Quizmaster**.

Step 3 · How you play → Online call

*📸 Real screenshot (build 155) — "How are you playing tonight?" with **Online call** picked: Speed Bonus 15 s, Phoenix Chip off, 2 rounds + Mastermind It!, Answering "Out Loud · Video Call".*

Tap **Online call**. One tap sets everything for a call:

- **Online Mode rules:** Speed Bonus on (with a **15-second** window, as answers take a moment longer on a call) and the pass-on bonus. The **Phoenix Chip, Triple Gamble and Bottoms Up are off**. Blind It! wagers are shown on screen.
- **2 rounds + Mastermind It!**, answers out loud. You can still change the number of rounds.
- 📹 **Video Call** switches on. The **Audience View** window opens at TV shape (16:9), with a calmer picture that looks better on a call. The **Presentation Check** pops up (Chapter 3).
- **Motion** goes to **Subtle** on this laptop. Prefer the full animations? Press **Keep Full motion** on the Setup note.
- 🎲 **Random turn order** is on: when the game begins, Mind It! draws the order of play at random, so nobody can say you chose it. The switch is in **Setup → 3 · Gameplay & Rules**.

Then choose the **Special Question**:

- 🕶 **Blind It!** — hidden squares where the team bets on itself (Chapter 6).
- 🤠 **Rewind It!** — the same squares spin a wheel for 1×–5× the value instead (Chapter 6).

Step 4 · Check

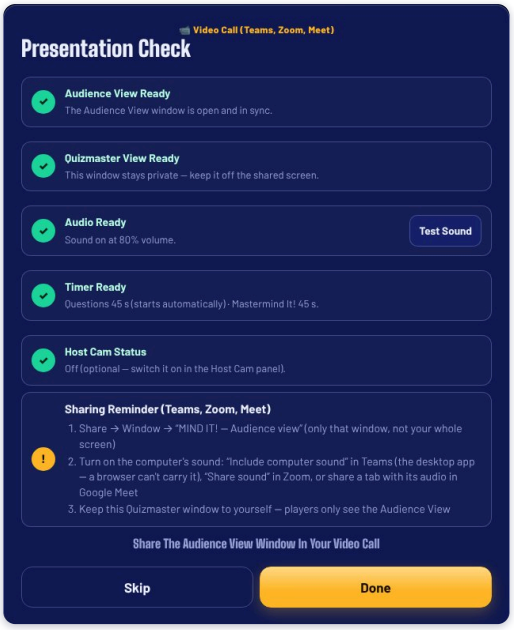

Each line is ticked or has a button that jumps straight to the problem: **Fix ›** (for example, a team with no players), **Connect ›** (the Audience View) and **Back up ›** (save a backup file). When you're happy, press **Begin game ▶**.

> **Good habit:** press **Back up ›** before every quiz night. It takes ten seconds (Chapter 9).

---

3. Sharing Your Screen on the Call

Players must see **only the Audience View** — never your Quizmaster window, which shows the answers.

📸 *Real screenshot (build 155) — the Presentation Check, which pops up when you pick Online call and when the game begins.*

The **Presentation Check** ticks off: the Audience View is open, your Quizmaster window stays private, sound is on (**Test Sound**), and the timers. Then:

1. **Share a window, not your whole screen.** In your call app: **Share → Window → "MIND IT! — Audience view"**.
2. **Turn on the computer's sound**, so players hear the music and the effects: - **Teams:** tick **Include computer sound**. This needs the Teams **desktop app** — Teams in a web browser can't share sound. - **Zoom:** tick **Share sound**. - **Google Meet:** share a browser **tab** with its audio.
3. Keep the Quizmaster window to yourself.
4. Press **Done**. (**Skip** closes it without the ticks.)

The card 📹 **Share The Audience View In Your Video Call** stays in your host panel as a reminder. **Presentation Check** opens it again; **Dismiss** hides it.

Good to know

- **Two screens?** Drag the Audience View window to the second screen. Your controls stay on the laptop.
- **One screen?** Keep the Audience View window open behind the Quizmaster window. **Never minimise it** — a call app can't show a minimised window. If players see a frozen or black picture, bring the Audience View window to the front for a moment.
- While the Audience View window is open, your host panel shows **"📺 Showing in the Audience View window"** instead of its own small copy of the screen. That's on purpose: it keeps the laptop fast during a call. You pick squares on the **Pick a clue** board at the top of the host panel.
- 📺 **Audience View ▾** in the top bar has **Open Audience Window**, **Present On This Screen** (the audience picture full-screen on the laptop; **Esc** to leave) and the 📹 **Video Call** switch.
- **Host Cam** (optional, off by default): a small live picture of you on the Audience View — video only, nothing is recorded. Switch it on in the **Host Cam ▾** card in your host panel and pick its corner and size. Most hosts don't need it on a call, as players already see your camera.

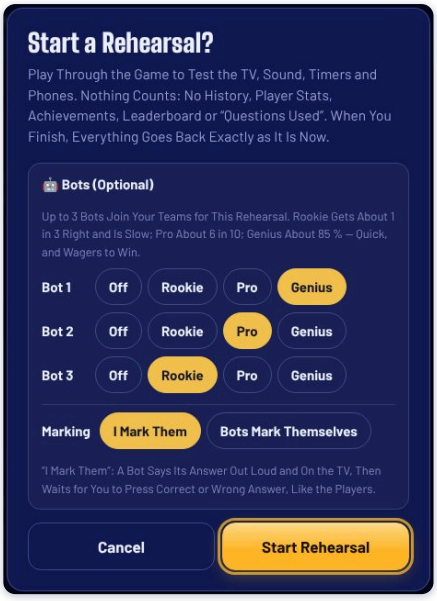

Do a practice call (10 minutes, the day before)

- [ ] Start a call with one friend. Open Mind It! and press **Rehearsal** on the main menu (nothing counts).

- [ ] Share the Audience View window. Ask: can you see the board? Can you hear the music?
- [ ] Play two questions and a Blind It!. Your friend sends a wager in the private chat.
- [ ] Check your friend can't see the answers.

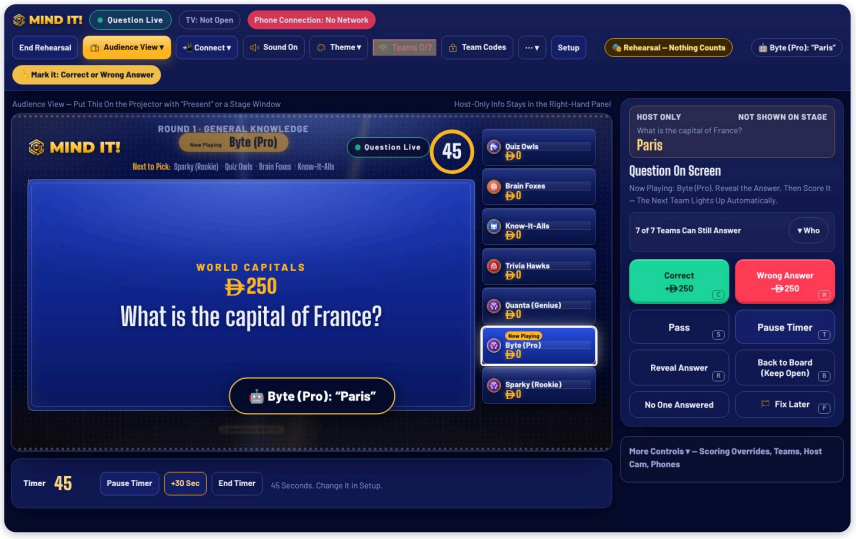

No friend free? Practise with bots

Rehearsal → 🤖 Bots adds up to three computer teams next to your real ones: **Sparky (Rookie)** gets about 1 in 3 right and is slow, **Byte (Pro)** about 6 in 10, **Quanta (Genius)** about 85 % and wagers to win. Nothing counts, and **End Rehearsal** removes them.

📸 *Real screenshot (build 160) — Start a Rehearsal with three bots: Genius, Pro and Rookie, and **Marking → I Mark Them**.*

- On its turn a bot **picks a clue out loud**, then **says its answer** — in the laptop's own voice, at the game's volume — and on the Audience View, on the edge of the question card.
- **Marking → I Mark Them** (the default): you press **Correct** or **Wrong Answer**, like for a person; the host bar says 👆 **Mark it**. **Bots Mark Themselves** does it for you.
- Bots bet on Blind It! and Mastermind It!, and sometimes **pass**. Share the Audience View on a test call to yourself and you can practise the whole night alone.

📸 *Real screenshot (build 160) — a bot's answer on the Audience View during a rehearsal.*

4. The Night Itself, in Order

1. **30 minutes before:** laptop on power, sleep off, other programs closed. Open Mind It! and do ▶ **Prepare tonight's quiz** (or 🔁 **Same as last time**).
2. **Back up** (the **Back up ›** button on the Check).
3. **Start the call.** Share the **Audience View** window with sound (Chapter 3).
4. Press **Begin game** ▶. Tick the **Presentation Check**, then **Done**.
5. Press ▶ **Start the show** (Chapter 5).
6. Play the rounds (Chapters 6–7).
7. Mastermind It!, then the end-of-night **step card** (Chapter 8).
8. 🏁 **End Quiz & save**. Done!

---

5. ▶ Start the Show

Press ▶ **Start the show** (or **Space**). One tap plays the whole opening on its own:

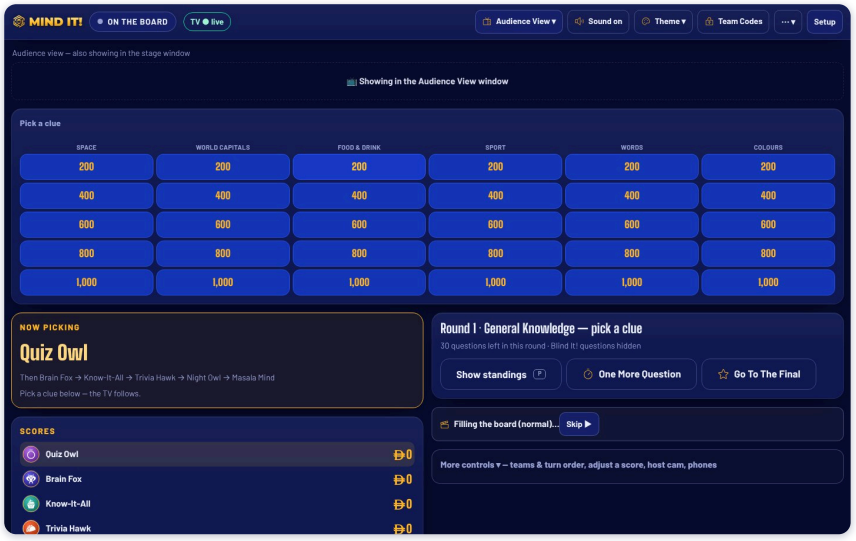

the loading screen → the intro with its music → 🎲 **Tonight's turn order** (the random draw, about 8 seconds, longer while the draw is still showing) → **How to play** (5 seconds) → **Round 1's categories** (3 seconds each) → the board.

- ⏸ **Hold** (or **H**) keeps the current screen up — for a welcome speech, or while you explain the rules. ▶ **Resume the show** carries on.
- ⏭ **Next: …** moves on straight away.
- The **How to play** screen explains a call for the players: answer out loud when it's your turn; send Mastermind It! wagers and answers to the Quizmaster in a private chat message.

The first team in the turn order lights up as **Now playing**. You're live!

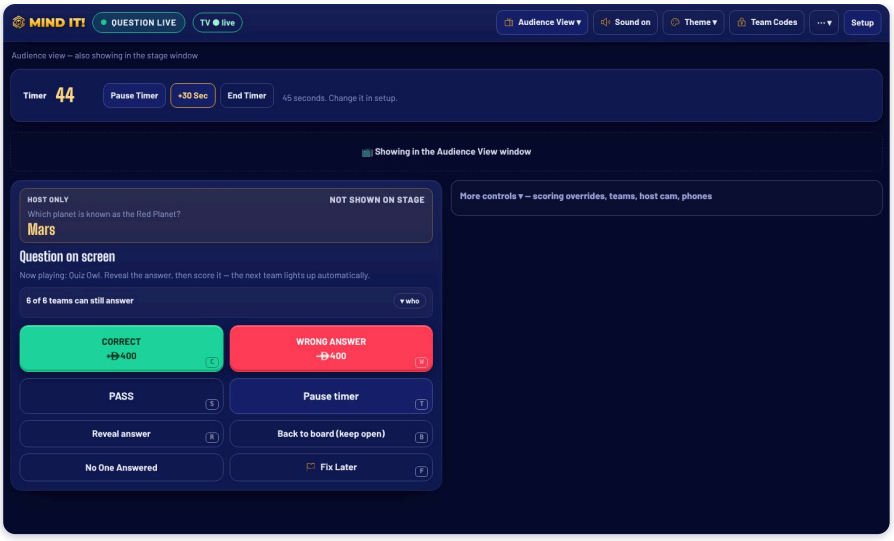

---

6. Running Each Question

📸 *Real screenshot (build 155) — Online Mode, the board: **Pick a clue** at the top of the host panel, **Now picking**, the scores, **Show standings**, **One More Question** and **Go To The Final**.*

1. The team picks. "World Capitals for 400, please!" Click that square on **Pick a clue**. The question goes up on the shared screen and the clock starts (45 seconds).

📸 *Real screenshot (build 155) — a question is live. The answer is at the top, for your eyes only.*

2. Read it out. The answer is in the **Host only** box at the top — "Not shown on stage".

3. The team answers out loud. You press one button:

Button (key)	What happens
CORRECT +400 (**C**)	+400. While the speed bonus can still be earned, the button shows ⚡ **+bonus** too.
WRONG ANSWER −400 (**W**)	−400. The same question goes to the next team, with a fresh 45 seconds.
PASS (**S**)	No points lost. The question goes to the next team, with 30 seconds plus whatever was left (45 at most).
Reveal answer (**R**)	Shows the answer on screen without scoring.
Back to board (keep open) (**B**)	Go back without scoring. The square stays open to pick later.
No One Answered	Close the question with no points.
⚑ **Fix Later** (**F**)	Spotted a mistake in the question? Flag it and carry on. You fix it afterwards in the Question Database.

- **Each team gets one go per question** (a wrong answer or a pass). When every team has had its go, the answer shows with **NO ONE ANSWERED** and the board comes back by itself.
- **"6 of 6 teams can still answer"** — tap **▾ who** to see each team's status.
- After every answer **the board comes back by itself**, and the next team in the turn order picks.

The timer. The **Timer** card has **Pause Timer** / **Resume Timer** (**T**, which carries on from the seconds left), **+30 Sec** and **End Timer**. When time runs out, a ⏰ **Time's up** card asks you: **WRONG ANSWER**, **PASS** or **Dismiss**. Nothing happens by itself. A good rule: no answer = PASS; a wrong answer = WRONG.

Bonuses (automatic):

- ⚡ **Speed bonus:** half of the round's lowest value (Round 1: +100), for the team whose turn it was, if they're right within **15 seconds**. Never after a pass or a wrong answer, and never on Blind It!.
- 🎁 **Pass-on bonus:** +25% of the value for every pass made on that question before the right answer.

Mistakes happen.

- **Undo last score** (**U**) reverses the last score exactly. After each score an ↩ **Undo** pop-up also shows for 8 seconds.

- **Adjust a score:** click the team's row in the **Scores** card. Type the amount and an optional reason (shown on screen).
- **Teams ▾** (Teams & turn order) has **Make active**, **Mark away** (a player dropped off the call — the turn skips them) and **Adjust score**.
- **Reset game** is in the ⋯ menu, away from the scoring buttons. It always asks first.

😾 **The Rascala! badge.** During play, the last-place team's score card wears a small cowboy cat. Nobody wears it while all teams are level.

End of a round. When the board is empty, the round summary shows, then the next round's categories (3 seconds each). Short of time? ⏱ **One More Question** makes the next question the last of the round. ⭐ **Go To The Final** skips the remaining rounds and goes to Mastermind It! after the round summary.

🕶️ Blind It! (if you chose it)

A hidden Blind It! square goes to the team that picked it, and only that team answers (no passing).

1. The screen shows the black sunglasses and "*team*, tell the Quizmaster your wager". The team says it on the call or sends it in the chat.
2. Type it in the wager box, or tap **Minimum · Half · Maximum**. Allowed: from the square's value up to the team's score (or up to 1,000 if their score is lower).
3. Press **Lock wager & show question**. In Online Mode the wager is shown on screen.
4. **CORRECT** = +wager. **WRONG ANSWER** = −wager.

If a team bets its whole score, the **NEVER MIND IT!** moment plays.

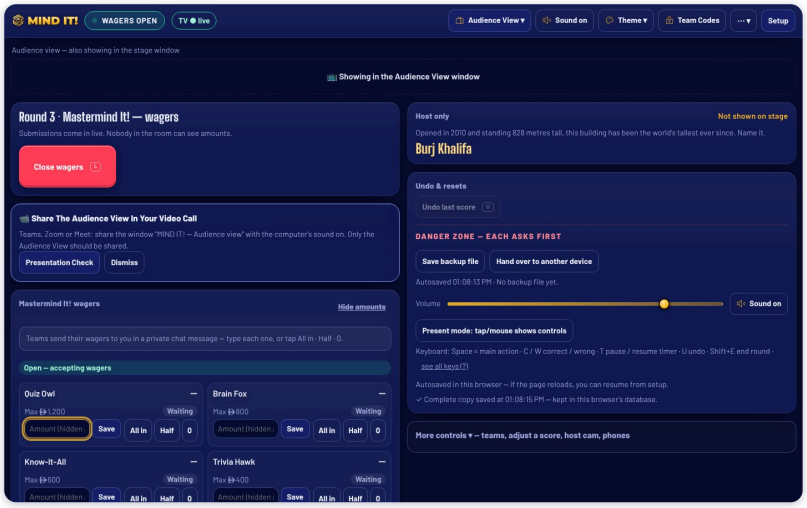

🤠 Rewind It! (if you chose it instead)

The same squares show the cowboy hat. Press 🤠 **Spin The Wheel**: the wheel lands on **1×, 2×, 3×, 4× or 5×** (all equally likely). Then **Show The Question (N×)**. Right = value × N. Wrong = value × N, but **never more than 3×**. No passing. In a Rewind It! game no chips are used.

---

7. Mastermind It!

After the last board round, Mastermind It! begins: the gold brain, then the **category**. Every team on **0 points or more** plays. Teams below zero sit out.

📸 *Real screenshot (build 155) — Online Mode, the Mastermind It! wagers: one box per team, with All in · Half · 0.*

1. Wagers, by private chat. The shared screen says 📩 **Send your wager to the Quizmaster · private chat message**. Each team sends you an amount from 0 up to its score. Type each one in its box (it's hidden as you type) and press **Save**, or tap

All in · Half · 0. When all are in, the question appears by itself. Or press **Close wagers** (**L**): any missing wager counts as 0.

2. The question. It goes up with a 45-second timer and thinking music. The screen says 📩 **Send your answer to the Quizmaster in a private chat message**. Need to change a wager? ✏️ **Change a wager** is on the right.

3. Reveal the answer (**R**) when the time is up and every answer has arrived.

4. Type and mark each answer. Your step card now lists the teams, lowest score first, each with a box **Answer from the chat**. Type the answer the team sent you and press **Save** (or **Enter**). Mind It! adds a suggestion beside the name — 🟢 likely correct, 🟡 have a look, 🔴 likely wrong — but **you decide**: tap ✓ (right), **×** (wrong) or **0** (wrong, no penalty). The marks stay hidden from the players. Change an answer and you mark it again.

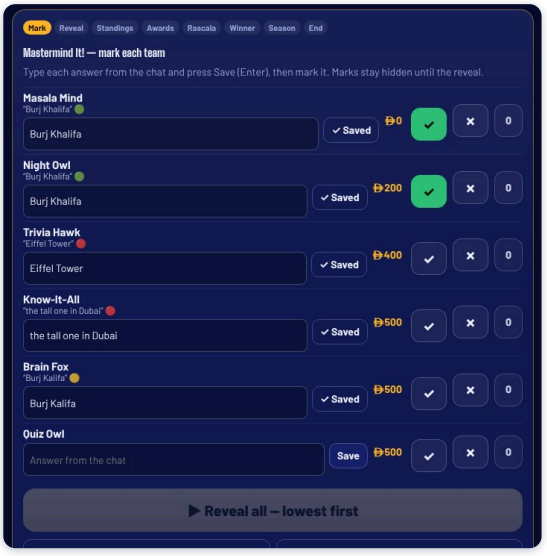

5. ▶ Reveal all — lowest first. One press reveals every team, about 2.5 seconds apart. ⏸ **Pause** stops it. Or reveal one team with **Reveal *team* only** (**V**).

The players see each team's answer, then **Correct** or **Wrong**, and the new scores. Right = +wager. Wrong = −wager. Wrong, no penalty = 0.

> **Teams level on points for 1st?** After the reveal, the card offers ⚡ **Play Tiebreaker**: one question from your Question Database, answered out loud; the first team you mark right wins. Skip it, and the team with the **most correct answers** wins.

---

8. The End of the Night: the Step Card

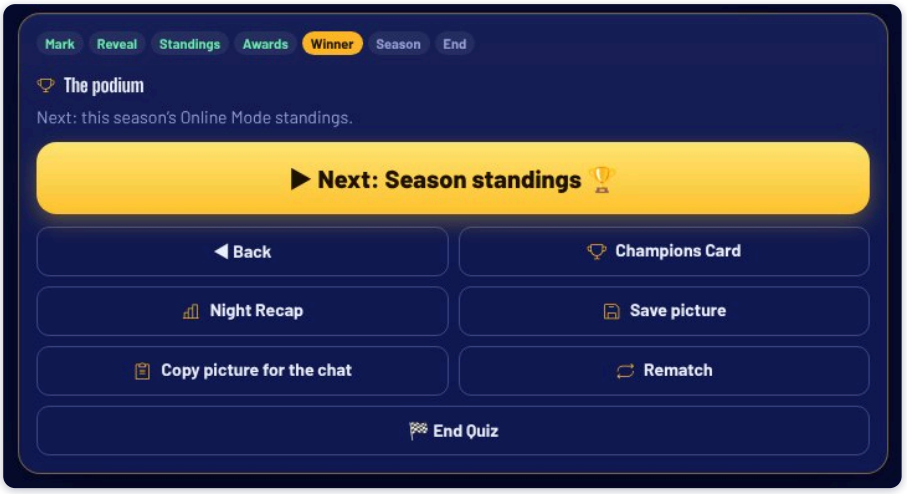

*📸 Real screenshot (build 155) — Online Mode, the step card at Mastermind It!: the step strip, then one row per team with the answer from the chat, Save, the wager and ✓ / × / 0. The gold ▶ **Reveal all — lowest first** lights up when every team is marked.*

From Mastermind It! to the very end, one card at the top of your host panel runs the show:

- **The step strip:** Mark · Reveal · Standings · Awards · Rascala · Winner · Season · End. The current step is lit.
- **One big gold button** for the next step. **Space** presses it.
- ◀ **Back** on every step, and a small 🏁 **End Quiz** in case you must stop early.

Step	What the players see
Mark → Reveal	Mastermind It!, revealed lowest score first (Chapter 7).

Step	What the players see
▶ **Next: Final standings**	4th place and below. **The top three stay secret** behind three "?" cards. (Skipped with 3 teams or fewer.)
▶ **Next: Tonight's awards**	One page: highlights, fun stats and achievements. Nothing gives away the top three. "+N more in the Night Recap".
▶ **Next: The Rascala!** 😺	The last-place team gets the cowboy cat, with its voice. Only when there is a last place.
▶ **Next: The podium** 🥁	**3rd**, then **2nd**, then **"And the winner is..."**. ⏭ **Winner now** skips ahead.
▶ **Next: Season standings** 🏆	This quarter's table of players (Chapter 9). Online Mode only.
🏁 **End Quiz & save**	Saves the game and goes back to the main menu.

📸 *Real screenshot (build 155) — Online Mode, after the podium: ▶ **Next: Season standings** 🏆, with Back, Champions Card, Night Recap, Save picture, Copy picture for the chat, Rematch and End Quiz.*

After the podium the card also has:

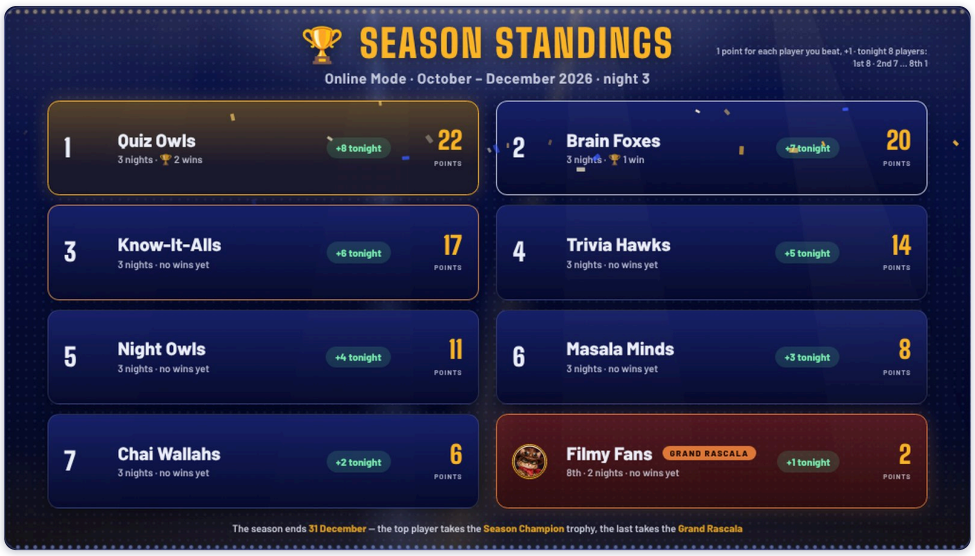

- 🏆 **Champions Card** — the winning team with its players' pictures, on screen.
- 📊 **Night Recap** — the champion, the final table, the night's numbers and highlights. (It only appears after the podium, as it names the winner.)
- 💾 **Save picture** — the standings or the Champions Card as a picture file.
- 📋 **Copy picture for the chat** — the same picture, ready to paste: click the call's chat box and press **Ctrl+V** (**⌘V** on a Mac). Also on the Season standings card.

🏁 **End Quiz & save.** It asks *"End tonight's quiz?"* — press 🏁 **End Quiz**. The game is saved to **Historic Games** and **Player Profiles** (a Rehearsal saves nothing). A thank-you screen shows, and you're back on the main menu.

🔁 **Rematch.** Another game with the same people? Press 🔁 **Rematch**. The game is saved first. Then: the same teams and players, the same rules, scores back to zero, and **new questions** from your Question Database (ones you've never played come first). **Prepare tonight's quiz** opens on its **Check** ("🔁 Rematch ready"). Press **Begin game** ▶. You need at least 10 questions in the Question Database, and there's no Rematch after a Rehearsal (it saves nothing).

9. Seasons, Records and Backups

🏆 Season standings and the Grand Rascala

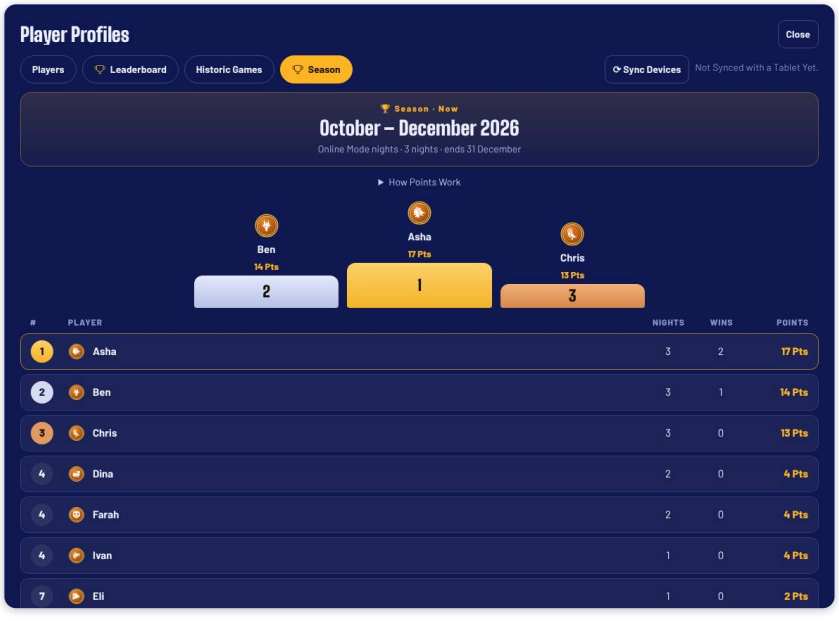

📸 Real screenshot (build 155) — Season standings after an Online Mode night: one row per player, "+N tonight", points, and the Grand Rascala on the last row.

Every **Online Mode** night counts towards a **season**. A season is a quarter: **Jan–Mar, Apr–Jun, Jul–Sep, Oct–Dec**.

- **Points each night = 1 + the number of players you beat.** With 8 players: 1st gets 8, 2nd gets 7 … 8th gets 1.
- Players level on the night share the better place's points. Everyone on **0 or below** shares last place: 1 point each.
- The table is of **people**, not teams. Each player collects their team's points. Missed a night? The row says **"not tonight"**. ▲▼ show moves since last night.
- At the end of the season, the top player is the 🏆 **Season Champion**. The last is the 😾 **Grand Rascala** — the cat sits in place of their number all season long. Level in last place? The player who played **more nights** takes it. Same number of nights? They share it.
- Older games (before build 155) count when every team had exactly one player.

Players & History → 🏆 Season shows this season's table with real names — a podium for the top three, then nights, wins and points per player — and the Champions and Grand Rascalas of past seasons.

📸 Real screenshot (build 160) — the laptop's Season tab in Players & History (made-up names).

Player Profiles and achievements

Players & History opens **Player Profiles**: each player's games, wins, **podium finishes**, best score and achievements, plus the 🏆 **Leaderboard**, **Historic Games** (every finished game, with a 🖼 **Results Picture**) and **Export / Import ▾** (player files and the Excel history).

Achievements are handed out at the end of each game. The 8 new in build 155:

👑 **Rascala To Royalty**	wore The Rascala! badge after round 1 — and won	💯 **Century**	100 right answers across all games
🧱 **The Wall**	a whole round with no wrong answer (3+ answers)	🗺️ **World Tour**	right answers in 10 different categories across games
💎 **Top Shelf**	right on the top-value clue in 3 categories	🔁 **Bounce Back**	on the podium the game after finishing last
🕵️ **The Steal**	right just after another team got it wrong, 3 times	🧠 **Memory Lane**	right on a question the team got wrong in an earlier game

Online Mode also has 💬 **Fastest Fingers**: the most times first with the right answer.

Backups

- **Mind It! saves the game after every change.** If the laptop or the app closes, open it again and choose ⏯ **Continue last game** (or **Resume saved game** in Setup). You're back on the same question.
- **⋯ ▾ → 💾 Backups & Restore → ⬇ Back Up Now** saves one file with everything: the game, players, history and the Question Database. Keep a copy off the laptop (a USB stick or cloud folder).
- A **Safety Backup** is also made by itself after every game, and before anything is replaced.
- **To restore: ⋯ ▾ → Backups & Restore → ⬆ Choose Backup File...**. It always asks first.

> **Good habit:** back up before the quiz, and after it.

---

10. Help! — Troubleshooting Checklist

Problem	Fix
Players see your answers	You're sharing your whole screen or the wrong window. Stop sharing, then **Share → Window → "MIND IT! — Audience view"** only.
Players can't hear the music	Teams: **Include computer sound** (desktop app only, not the browser). Zoom: **Share sound**. Meet: share a tab with audio. Check 🔊 **Sound on** in Mind It!'s top bar and **Test Sound** in the Presentation Check.
Players hear an echo	Your microphone is picking up the laptop speakers. Use a headset.
The picture is frozen or black for players	The Audience View window is minimised or closed. Open it again: 📺 **Audience View ▾ → Open Audience Window**, then share it again.
The picture is too small for players	Make the Audience View window bigger, or put it on a second screen at full size. 📹 **Video Call** makes the question and answer about 12% bigger. Players can view the share full-screen in their call app.

Problem	Fix
The picture is choppy	Keep 📹 **Video Call** on (it calms the animations) and **Motion: Subtle**. Close other programs. Ask players to turn off their own video if the call struggles.
The laptop is slow	Plug it in. Close browsers and other apps. The host panel's own small picture rests while the Audience View window is open; that's normal.
No small picture of the screen in my host panel	Normal while the Audience View window is open. Pick squares on **Pick a clue**.
A player dropped off the call	**Teams ▾ → Mark away**: their turn is skipped. **Make active** when they're back.
Wrong score	**U** (Undo last score), or click the team's row in **Scores** to adjust.
I scored the wrong team at Mastermind It!	Change the ✓ / ✕ / 0 before that team is revealed. ✏️ **Change a wager** fixes a wager.
The app closed	Open it again → ⏯ **Continue last game**. Then restart or extend the timer as fair.
A question is wrong	⚑ **Fix Later** (F) and carry on. Fix it afterwards in the Question Database.
Speed bonus feels unfair on a laggy call	Online Mode allows 15 seconds. Change it in **Setup → 3 · Gameplay & Rules → Answer Within**, or switch it off.

11. Keyboard Shortcuts

The full list is in the app too: ⋯ → ⌨ **Keyboard Shortcuts**, or press **?**. A key only works when its button is on screen.

Key	Action	Key	Action
Space	The gold button (Start the show, the step card…)	**T**	Timer: start · pause · resume
H	⏸ Hold during Start the show	**U**	Undo the last score
C	Correct	**B**	Back to board (keep open)
W	Wrong answer	**P**	Show standings
X	Wrong, no penalty	**F**	⚑ Fix Later
S	Pass	**L**	Close wagers
R	Reveal the answer	**V**	Reveal (Mastermind It!, next team)
Shift+E	End the round early (asks first)	**Esc**	Close a box · leave Present mode

Every "are you sure?" box starts on Cancel, so a stray Space or Enter can't end a round or undo a score.
